

Pulse™ Meter

Measure root
zones faster,
grow better crops

3 in 1

**Moisture, Nutrient (EC) and Temperature
in under 10 seconds**

Handheld meter for fast root zone
measurements that sync directly to
your smartphone.

No more PourThrus, extractions or
kicking pots.

360x
faster
than a
pourthru¹

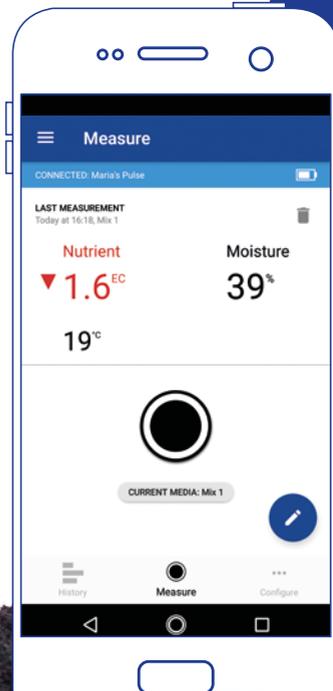

Plant-health in the palm of your hand

Our innovative new hand-held Pulse™ Meter allows growers to get fast, accurate measurements at the root zone.

Enhanced technology sends data directly to the Pulse™ app, providing growers with fast and accurate information to better manage crop health, without the need to connect to a computer.

Free Bluelab Pulse App for:
Android 5.1 with Bluetooth 4.0, and later
iPhone 6 with iOS 12, and later

Three instant measurements

Pulse measures three key growth components to help growers increase yield, improve crop consistency and reduce shrink.

Moisture

Optimise irrigation cycles and water consumption.

Nutrients (EC)

Optimise growth by ensuring the right amount of nutrients at every growth stage.

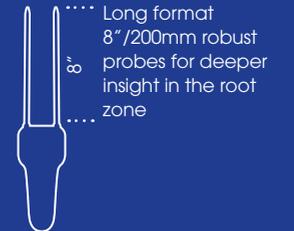

Temperature

Spot fluctuations, optimise root function and control the health of biologicals.

Measure faster with Pulse

- Measure more, faster. Three measurements in under 10 seconds
- Measure in soils, potting mixes and coco coir blends
- Sync, view, analyse and store all your measurement data in the Pulse app
- Record notes quickly in the app to track useful information such as measurement location or plant observations
- Move faster with Blink™ – get quick in or out-of-range indicators on the Pulse Meter
- Measure consistently with the built-in depth gauge

¹NC State PourThru method takes 1 hour, Pulse takes 10 seconds

Tools for success

Bluelab® enables growers to produce healthy, nutrient-rich plants, with hand-held meters, monitors and controllers that easily and effectively measure and control pH, nutrient (EC), temperature and moisture in solutions and substrates.

Success by simplicity

With over 30 years expertise, Bluelab® products provide growers with the critical data they need to maintain a productive system, empowering better growers and promoting better yields.

From commercial through to home-based growing environments our specialist products are perfected to the needs of a diverse range of industries.

Simple to use, built to endure, and most importantly, always accurate. Our mission is to enable growers around the world to create optimal environments for growing the best plants and foods.
