Bigger Yields, Higher Quality

Upgrade to the ultimate indoor
growing environment!

HOMEbox® Product Lines represents the culmination of everything we know about growing plants indoors. Ever since we invented the original portable grow tent back in 2001 we haven't stopped innovating and improving.

The result are HOMEbox® Ambient and Vista – our most advanced portable grow tents to date. Quite simply, it forms the ideal space for growing plants indoors, unsurpassed by any other grow tent on the market.

PAR+

Our PAR+ super reflective lining is exclusive to HOMEbox® tents. No other grow tent offers PAR+, the key to intensive, super productive indoor growing. PAR+ is a “smart material” that directs more usable light and less heat at your plants compared with silver lined grow tents. Growers consistently report increased yields and higher quality produce when growing in a par-optimised environment.

OmniFlow-Airvent

Our unique, rounded OmniFlow-Airvents give growers an extra level of control to fine tune their growing environment. OmniFlow-Airvents are the most easy to seal passive intakes on the market – no more fussing with Velcro. It allows growers to actively direct incoming fresh air to exactly where it's needed – usually between the plant canopy and the grow light – for maximum benefit to the crop.

High capacity

All HOMEbox® models are equipped with sturdy powder coated steel rods that offer almost unlimited possibilities for suspending heavy ventilation and lighting systems. The larger tents in the HOMEbox® Ambient lines (Q100 and above) and the Vista Triangle are equipped with 22 mm diameter frame rods and can bear a piece of equipment of up to 200 kilograms without any problems. The 16 mm rods in smaller grow tents and at the Vista Medium can handle a load of up to 100 kilograms.

Double base for more protection

All Ambient and Vista models are fitted with an additional solid tent base as well as the familiar liner base. This not only provides additional protection against leaks in the event of over watering, but in combination with the OnmiFlow-Airvent meshes, also prevents uninvited guests getting into the tent.

Total-Blackout Zippers

Create a light proof seal without the need for additional flaps and Velcro. Total-Blackout Zippers feature an enhanced HOMEbox® zip pull. Our unique design allows all zips to be fully operated using just one hand with no threading required making getting in and out of your garden easier than ever.

Additional Air-Ports

Larger, adjustable air ports with improved closure to accommodate ducting from extraction fans up to 250 mm (10"). Larger models in the HOMEbox® Ambient range also feature additional air ports to accommodate ducting from air cooled reflectors.

Stronger

Our larger tents from Ambient (Q100 and larger) and Vista Triangle come with stronger 22mm frame poles and reinforced connectors and hooks giving you unlimited possibilities for suspending heavyweight ventilation, filtration and lighting equipment.

HOMEbox® – The Best Indoor Growing Experience for your Customers

As a trusted HOMEbox® reseller you already know that some customers appreciate working with the best tools on the market. Now, in presenting our HOMEbox® Product lines Ambient and Vista, you are truly offering the top-of-the-line portable grow tent to your customers.

We want to help you every step of the way. In this digital media pack you will find everything you need to present the new HOMEbox® Ambient and Vista range attractively to your customers. Be sure to check out all the new, unique features and tent models along with our full range of growing accessories. You will also find general brand information to help your staff highlight the stand out benefits of HOMEbox® grow tents.

This marketing pack has been specifically designed to help you power up your in store promotions, website and printed literature.

If you have any questions please do not hesitate to get in touch with us. Best wishes,

The HOMEbox® Team.

Description

How to Describe HOMEbox® to your Customers

HOMEbox® is the industry-leading name in portable grow tents, peerless in quality, durability, innovative features and of course productive capability.

HOMEbox® should be presented as a premium brand at the cutting edge of the marketplace.

Growers who want to create a “no-compromise” PAR-optimised indoor growing environment should always be encouraged to invest in a HOMEbox® grow tent.

1. THE ORIGINAL!

HOMEbox® was the ORIGINAL grow tent and has consistently led the market with innovative new features!

2. TOTAL-BLACKOUT-ZIPPERS

Total-Blackout Zippers provide additional strength and light proofing without the fuss of flaps and Velcro. Tough canvas material with an inner layer of thick, flexible, food-grade polyethylene.

3. MORE AIR-FLOW CONTROL

Our patent OmniFlow-Airvents give growers superior climate control.

4. PAR+ SMART MATERIALS

HOMEbox® are the only grow tents with PAR+ super reflective lining.

5. HIGHER YIELDS

PAR+ reflects more plant-usable energy with less excessive heat build-up helping to produce larger yields and a higher quality crop.

6. DESIGNED IN GERMANY

High-tech German design and engineering throughout.

7. GREATER PROTECTION

More inlet and outlet tubes and MicroMesh bug screens on ventilation windows offering greatly improved protection from pests.

8. STRENGTH WHERE YOU NEED IT

Stronger metal framework, hooks and connectors with precision plastic corners.

9. EASY TO ASSEMBLE / VERSATILE

HOMEbox® grow tents are easy to assemble. They are also compatible with a wide range of growing systems including modular flood and drain, dripper irrigation, NFT, bubble buckets / DWC.

10. WARRANTY

We stand by our products with a two year manufacturer's warranty.

10 Taglines

Use these simple taglines to introduce the **HOMEbox®** brand to your customers on your website or product catalogue.

-
- 1 The world's most advanced grow tents.
 - 2 For growers who insist on perfection!
 - 3 The original grow tent and still the best!
 - 4 Often copied, never equalled.
 - 5 Designed in Germany, without compromise.
 - 6 The cutting-edge of grow tent technology – since 2001.
 - 7 Exclusive PAR+ super reflective lining.
 - 8 Direct more light and less heat at your plants.
 - 9 Promotes higher yields and increased crop quality.
 - 10 Bringing quality home!

Use the DOWNLOAD-BUTTON on the following pages to start the download of all product related media we can provide!

! In order to use the pictures, you need a right to use our pictures. This will be given to you when you receive the media pack and can be revoked at any time without giving reasons.

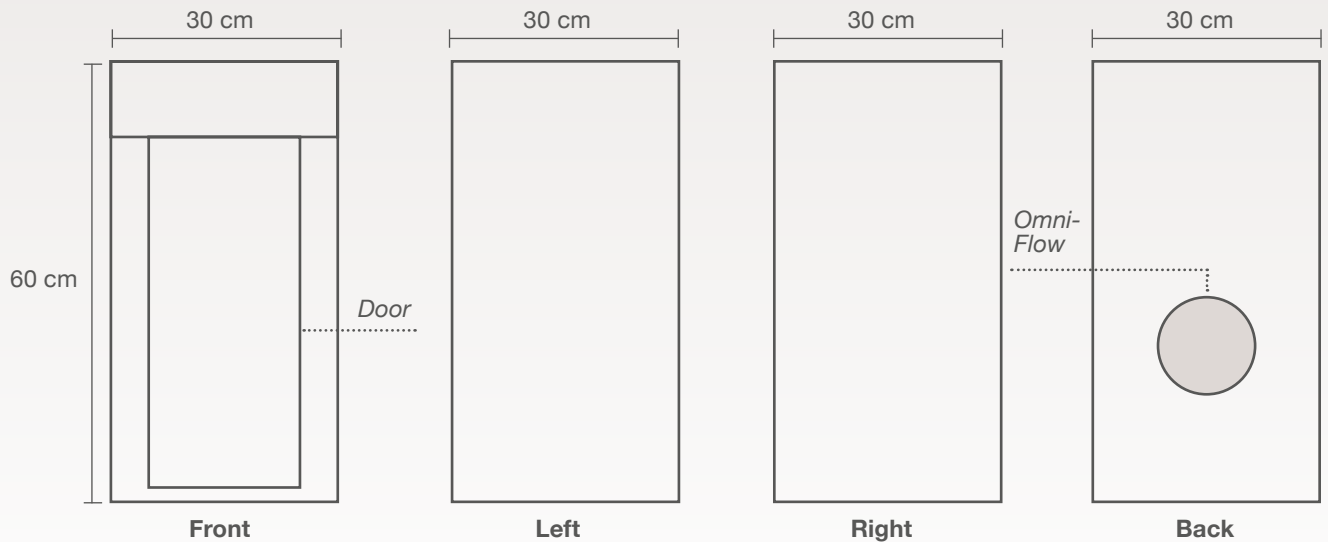

Ambient

Beige is the new black

Our new Ambient product line will be available in all the familiar sizes, ranging from the miniature Q30 version to the maximum growing experience of the Q300+. All models feature the tried and tested technical details of HOMEbox® products, but have been further enhanced with a solidly integrated base. The name Ambient makes the message clear: integration into the living space, for a „beautiful living experience“ for home gardeners.

Q30

Small can be beautiful!

It's a HOMEbox® premium quality grow tent—just in miniature form! Now everyone can find the space for an indoor growing project of their own thanks to the HOMEbox® Ambient Q30—the smallest of the HOMEbox® Ambient range. Measuring just 30 x 30 x 60 cm, it can be easily illuminated with a low wattage LED or compact fluorescent lighting fixture. It's PAR+ super reflective lining allows growers to create an intensely lit growing area without the excessive heat issues.

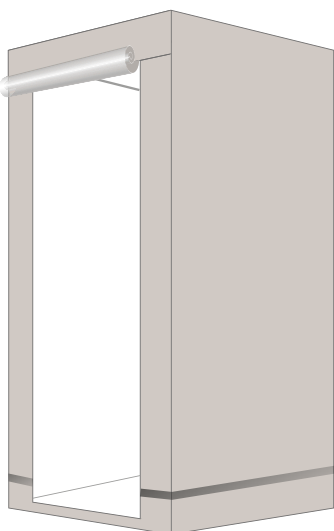

Assembled size: 30 x 30 x 60 cm

Grow space: 0.09 m²

Q60+

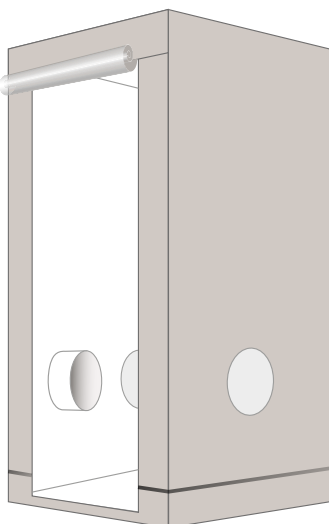

Ideal for
beginners

The HOMEbox® Ambient Q60+ is ideal for growers who want to manage their own personal requirements of home grown herbs and other compact plants. Amazingly it takes up about the same space as a small bookcase yet can accommodate between one and five plants! It is ideally lit with a compact fluorescent grow light every photon being maximised towards full potential thanks to the PAR+ super reflective lining, exclusive to HOMEbox®. Despite its compact size, the HOMEbox® Ambient Q60+ is still astoundingly productive, especially when combined with a hobby hydroponic growing system.

R80S

Perfect add-on
for cuttings!

It's compact, but powerful! The HOMEbox® Ambient R80S is ideal for generating dozens of cuttings and seedlings in the smallest of spaces. Complete with PAR+ super reflective lining and ideally lit with LED or compact fluorescent grow lights, growers can always be well stocked with rooted, vigorous cuttings for year round production.

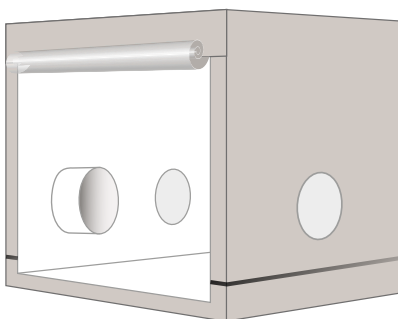

Assembled size: 80 x 60 x 70 cm

Q80+

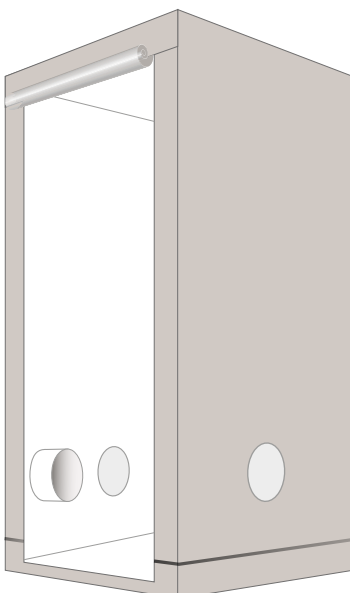

Never go
short of your
favourite crops!

For space conscious and intensive indoor production it's hard to beat the HOMEbox® Ambient Q80+. This highly versatile grow tent can be used for growing freshly rooted cuttings or seedlings into juvenile plants, keeping a single mother plant in peak condition or even flowering and fruiting up to ten small plants to full maturity. Ideally lit with a 250 watt metal halide or high pressure sodium lamp, the HOMEbox® Ambient Q80+ is compatible with the full range of popular growing methods. The PAR+ super reflective lining transforms this compact growth chamber into a highly productive indoor cultivation environment with unparalleled reflectivity combined with effective heat dissipation for higher quality crops.

Q100

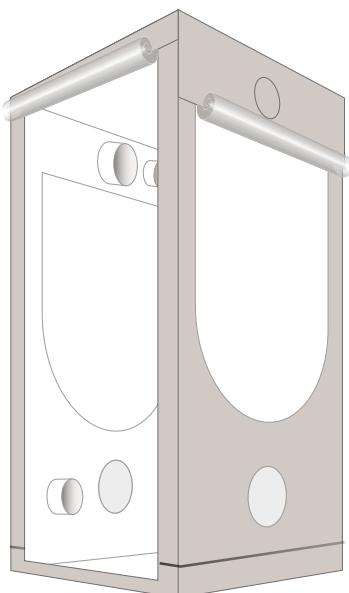

The Hydro Dynamo!

The HOMEbox® Ambient Q100 is based on a square meter of growing space. Its generous 2.0 m height makes it a particularly popular choice with hydroponic growers where plants tend to be raised slightly higher off the ground in growing systems. All the quality features you've come to expect from HOMEbox® are here: roof inlets for easy mounting of extraction equipment, sturdy zips, MicroMesh bug screened, OmniFlow air inlets and, of course, the PAR+ super reflective lining to make the most of every photon from your grow light. Highly recommended for the keen hobbyist who wants to enjoy high quality produce 365 days of the year!

Q100+

The Hydro Dynamo!

The HOMEbox® Ambient Q100+ is based on a square meter of growing space. Its generous 2.2 m height makes it a particularly popular choice with hydroponic growers where plants tend to be raised slightly higher off the ground in growing systems. Recommended lighting: 400 watt metal halide or high pressure sodium lamp. The 160 mm (6.3") parallel ducts positioned high in each side panel allow for easy and independent ventilation of air cooled reflectors.

R 120

The perfect fit!

Hobby growers looking to make the most of a single 400 watt grow light need look no further! This new ingenious design provides just over a square meter of growing space, but in rectangular form. Why? Because it's ideally proportioned to exploit every photon from a 400 watt HID grow light housed in a rectangular reflector. The HOMEbox® Ambient R120 has been tailor made to create an evenly lit and intensely productive grow space thanks to both its perfect proportions and PAR+ super reflective lining.

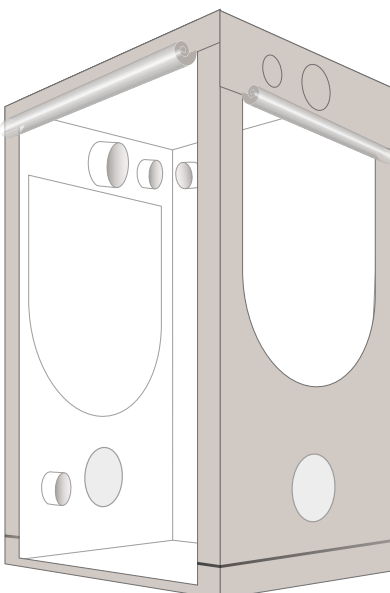

Assembled size: 120 x 90 x 180 cm

Grow space: 1.08 m²

Q120

Astoundingly
productive!

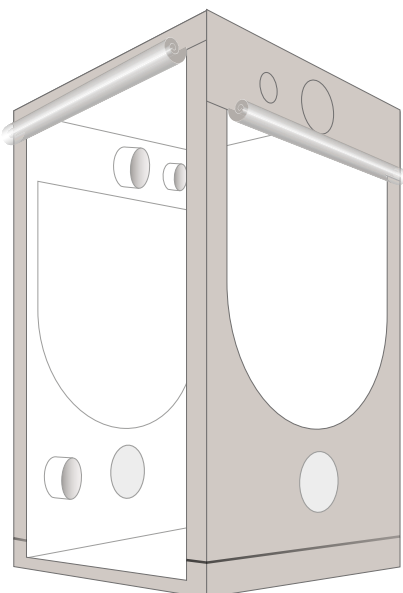

Nothing performs like a 600 watt HID grow light housed in a HOMEbox® Ambient Q120! It's all thanks to the PAR+ super reflective inner lining. Plants develop faster and produce more flowers and fruit because more plant usable light is directed at the canopy.

The HOMEbox® Ambient Q120 is a clear favourite among dedicated indoor growers and can be used for all stages of the plant lifecycle, however the most popular application is a flowering chamber using a high pressure sodium lamp – amazingly, up to 36 small plants can fit inside this super productive grow box!

Q150+

Versatility
Olé!

The Q150+ not only perfectly fills the gap between the Q120 and the Q200+ but also provides you with new possibilities at higher levels. With their 2.2 m high, your plants now have more space to grow to even greater heights – for an optimum harvest in your living room!

1000 W plant lights are ideal for optimum illumination, these look after your favourites perfectly and enable the best possible use of the 2.25 m² floor area.

R240

Jumbo crops
in any
spare room

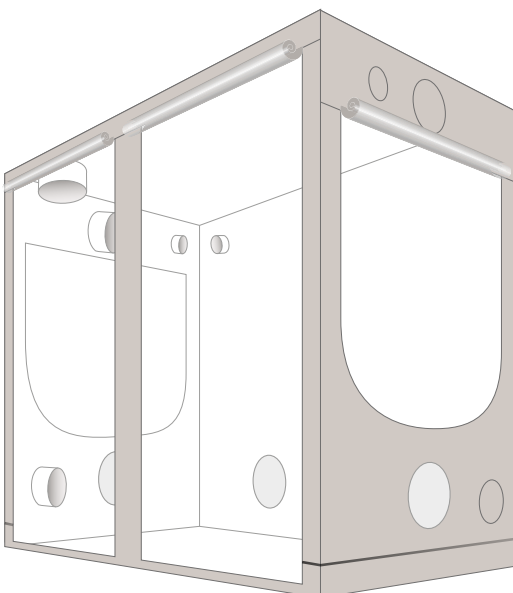

For growers lucky enough to have a little extra room to dedicate to their hobby, there's really only one way to go: the HOMEbox® Ambient R240. Boasting two 300 mm (12") roof inlets, parallel 250 mm (10") air ports for independent ventilation of air cooled reflectors and four OmniFlow adjustable air vents, this truly is a powerhouse for the industrious indoor gardener.

The R240 can house two 600 watt lamps or two 1000 watt metal halide or high pressure sodium lamps (air cooled reflectors recommended for 1000 watt lamps). Some growers mix and match lamp types to provide a fuller spectrum to their plants. Growers are astounded by both the quantity and quality of their harvest from a HOMEbox® Ambient R240. A great choice for the dedicated hobbyist or professional grower.

Vista

The tent with a view

Like the Ambient grow tents, the Vista products come in an elegant, modern shade of beige. This also enables them to be automatically incorporated into the room ambience. They also have large viewing windows so you can look in without altering the climate inside. This product line also features a new solid base and all the technical features that the HOMEbox® brand stands for.

Vista Triangle+

It's all about the height!

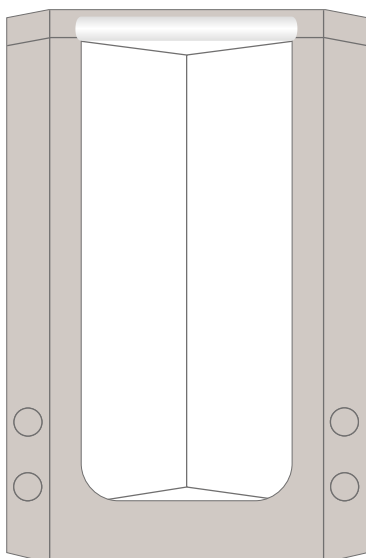

Our indoor greenhouse for corners is now also available in a 200 cm high version – the HOMEbox® Vista Triangle+. The triangular base not only lets you make optimum use of every corner of the room for an indoor grow house, but also provides your plants with more room for growth.

This triangular indoor greenhouse also has a large window in the front section that gives you a large view inside the tent, without compromising the inside climate. A LED / 250 watt bulb provides the ideal illumination.

Vista „T+“ Media-Pack

- The basis for successful growing
- Developed and designed in Germany
- Rugged, easy care materials
- Removable, water resistant flooring
- PAR+ super reflective lining
- Total-Blackout Zippers

Add-Ons:

- Triangle Shelf
- Equipment Board

Vista Medium

Flexibility!

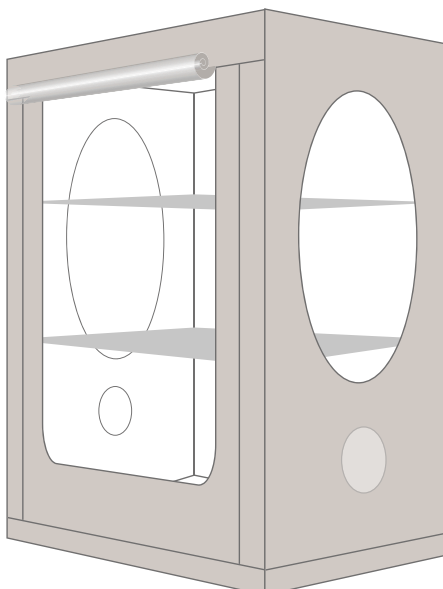

The HOMEbox® Vista Medium has fantastic new features that make propagating plants even easier. The viewing windows on the front and sides let you give your valuable plants the attention they deserve. They can of course be sealed to create a usable area that is completely impermeable to light if required. The optimal reflective PAR+ inner lining helps produce ideal lighting conditions and simultaneously reduces the risk of excessive heat building up in the sensitive atmosphere.

The Vista Medium is equipped with an adjustable shelving system. So you can freely choose whether to load the useable area with up to 12 large propagators or let the plants have the luxury of more free room to grow. In addition, there are four individual shelf inserts available that can be used variably. It is thus possible to create a spacious grow tent on one side of the tent and use the other area for smaller plants – unbeatable flexibility!

Vista „M“ Media-Pack

Click on the green button to start the download!

Assembled size: 125 x 65 x 120 cm

No matter what style of grower you are, HOMEbox® has you covered. Take your growing operation to the next level with this unique range of growing accessories, design to complement your HOMEbox® grow tent.

HOMEbox® Drynet

HOME AND DRY

Many growers dry their produce to seal in aromas and flavours for easier storage. The Drynet takes the hassle out of this process. At harvest time simply hang your Drynet up and your HOMEbox® instantly transforms into an ideal crop processing area.

The Drynet comes in two sizes. The DN90 has six layers, each with a diameter of 90 cm, and comes complete with a portable bag. It provides you with more drying surface area than any other net on the market. For smaller growers the DN60 is the ideal choice a single, extendable 60 cm diameter layer. Both models of Drynet incorporate a raised edge (8 cm) to prevent your crop falling and bruising.

Drynets ensure your crop dries gradually, evenly and safely thanks to the breathable mesh material this also helps to make post-harvest mould issues a thing of the past.

HOMEbox® Fixture Poles

FOR ADDITIONAL STRUCTURAL SUPPORT

Growers living in warm and humid climates sometimes require additional extraction. HOMEbox® Fixture Poles provide additional structural integrity so that your tent lining does not bow in due to lower air pressure inside the tent. HOMEbox® Fixture Poles can be simply clipped into place on the inner frame, allowing your plants the maximum space in which to grow.

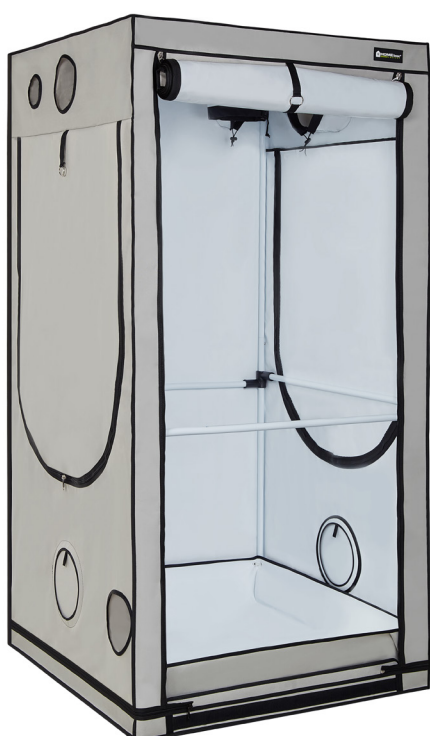

COMPATIBILITY

Fixture Poles 80
AMBIENT Q80+

Fixture Poles 100
AMBIENT Q100 / Q100+ / Q200+ / Q300+ / R300+

HOMEbox® Triangel Shelf

THE TRIANGULAR ONE FOR THE CORNER

The new extra base for our triangular boxes is here! With it you will now have even more space in your corners and / or can make more effective use of them. Whether one extra base or two or three, you have the choice and the possibilities. And thanks to our unique fixing system, the bases are flexible and can be used at higher levels.

- Maximum Capacity: 40 kg
- Sizes: 103 cm to 63 cm
- Pure flexibility
- Height-adjustable floor
- Doubling the useful area
- Several floors can be used

HOMEbox® Equipment Board

ONE FOR ALL!

The new HOMEbox® Equipment Board, independent from pole size of frame, can be installed horizontal as well as vertical. It fits in all most current grow tents.

The advantages of the HOMEbox® Equipment Board are:

- size-independent and suitable in most grow tents
- horizontal and vertical installable
- more space for more plants
- maximum load capacity: 25 kg
- keeps your equipment organized
- Measurements: 90 x 38 cm
